

Ghindariu Ana

SENIOR SOFTWARE
ENGINEER

+40747816871

@ ana.ghindariu@gmail.com

Professional Summary

Throughout my career I have been continuously looking to improve my skills so I can get to build safe, steerable and trustworthy systems that have impact in fields whose values resonate with my inner beliefs. Advancing the frontiers of human understanding and contributing to systems which help solve the world's most pressing problems has been a driver for me ever since.

Skills

.NET ecosystem	
Python	
AWS	
Customer Service	
Team Work	
Machine Learning	
Leadership	

Employment history

Software Engineer, Qiagen

May 2019 – Present

Qiagen has been a cornerstone in helping me see how software systems can enable efficient understanding of massive data from numerous sources, leveraging new insights in molecular diagnosis and drug discovery fields. My contribution to Omicsoft, a complete cloud-enabled NGS analytics product, has been as an engineering member, while also an active liaison between the processing, development and QA teams.

As a senior software engineer, I worked on expanding the existing framework for single cell data analysis, by developing customized storage infrastructure, improving the efficiency of the processing solutions and implementing graphical components for enabling the visualization of large amounts of data. I have also been responsible with the integration of a various number of bioinformatic tools in the cloud-based analysis pipelines, as well as restructuring part of the integration with AWS. I had the chance to contribute in laying the groundwork for unit testing, automatized integration pipelines, CI pipelines and restructuring and monitoring the AWS development infrastructure. My experience here relies both in the cloud, on premise and SaaS deployments, Windows and Linux environments.

Qiagen gave me the opportunity to improve my skills in requirement gathering, feature analyses across multidisciplinary teams, architecture and scalability design, systems integrations, development of complex solutions, deployment on different operating systems and, last but not least, the opportunity to work with a wide variety of professionals.

Tech stack: .NET Framework 4.5, AWS services, Python, Boto3, DevExpress, SQLite, custom DB and scripting language

NET Software Developer and Co-founder, RiseTech

Sep. 2017 – Feb. 2019

While mainly being involved in the technical processes, I had been an active member in maintaining a proactive client engagement (business analyses, solution design, client support), thus contributing to the transformation of their business needs into digital solutions.

My central attributions were in developing our main product, RaBit, a product for helping small and medium companies to create top-bottom objective focused management. I oversaw the product's architecture and development, taking full responsibility on assuring projects delivery and quality on planned time. Also contributed to its vision through technical and UI/UX solutions.

Other projects involved developing a full custom ERP warehouse management tool using Asp.Net Web API and Android mobile solutions as well as an online consulting platform.

Software Developer, Pitech+Plus.

Apr. 2015 – Sep. 2017

Developed, maintained and provided support for projects from the .NET ecosystem (ASP.NET MVC, ASP.NET/CORE WEBAPI and Xamarin). Designed and managed database, by making use of SQL Server and .NET tools. Developed functionalities both back-end and front-end parts. Analyzed code for system testing and debugging. Performed Unit using NUnit framework and Moq. Documented the applications. Other responsibilities implied holding workshops for Xamarin-Forms and Xamarin-Android trainings.

Education

Babes-Bolyai University, Cluj-Napoca, Cluj

- **Master of Software Engineering, Engineering, Sep. 2021**

The Master Thesis is the product of my collateral studies in bioinformatics, molecular diagnosis and machine learning. The key idea was to analyse existing predictors in the binding site attachment and address one of their main limitations by coming up with a new processing and model approach. Paper can be accessed here: <https://drive.google.com/file/d/1YyIHfEdYeeCpj9TxVXLTXgPNopDWPd6/view?usp=sharing>

- **Bachelor of Computer Science, Feb. 2016**

Online Course

- **Neural Networks and Deep Learning, DeepLearning.AI, Jun. 2021**
- **Genome Sequencing, University of California San Diego, Aug. 2021**
- **Introduction to biology, Massachusetts Institute of Technology, Oct. 2019**
- **Finding hidden messages in DNA, University of California San Diego, Jun. 2019**
